

Features

Seamless Integration with Blue Chip - HCN's Practice Management System.

- Information required for the Private Hospital claim form and HCP statistics is captured automatically through seamless integration with Blue Chip. Blue Chip is HCN's practice management system designed exclusively for Specialists.

Episode Driven

- For each visit by the patient a new episode is created by the database.
- Information can be sorted by episodes or by patient demographic details.

Health Department Statistics

- Simply ask Blue Chip Day Surgery to create the statistics for transmission to the Health Department. Transmit the file via modem or forward by disk.
- Health Department Statistics management have been made available for most Australian states.

ICD 10 Coding

- Blue Chip Day Surgery comes standard with the full ICD 10 database. Type in the code to find the Principal Diagnosis or type in the diagnosis to find the code. Smart fields help speed up the coding.

Australian Bureau of Statistics

- Let Blue Chip Day Surgery take the hassle out of compiling the ABS report. Choose the standard report from the menu and either transmit the file via modem to the ABS or forward by floppy disk.

Forms - (Claim and Admission Forms)

- Select the form and it is produced through the laser printer on blank paper.
- Most forms for recording information can be eliminated - because Blue Chip Day Surgery automatically collates the statistics that are needed

AN-DRG Grouper Link

- Let the software query the grouper package (currently available from 3M) and pick up the correct AN-DRG for health fund contracts.

Private Hospitals Data Base (PHDB)

- Automatically create the statistics for the Private Hospitals Data Bureau. Send by floppy disk or transmit via modem.

Hospital Casemix Protocol (HCP) Reporting

- The software automatically compiles the HCP data for the health funds from the information entered. Simply run the HCP creation module choose the health fund and copy to file or for on transmission to the nominated fund.
- Blue Chip Day Surgery has Group HCP Capability

Procedures Database

- The software comes standard with the full day facility procedures' database. To find the code key in the procedure or if you know the code, type it in and it will automatically fill in the field.

Date	Item	Description	Location	Discount	Fee	GST	GST Disc	GST Fee	
11/07/2001	T.32190	Theatre Fee for			250.00	0.0%		250.00	
11/07/2001					350.00	0.0%		350.00	
								Sub total + GST	600.00
								Balance	600.00

Billing information in Blue Chip creates Day Surgery episodes seamlessly...

Medical Record Number: 234423498
Patient Name: MRS Janet
Street address: 3 Oberon Avenue
City: BIRCHMERE
State: NSW
Country: Australia

...so that both the Account and Episode in Day Surgery are created automatically.

Service	Charge	Contracted Dr
Accommodation	\$70.00	
Theatre	\$50.00	
Labour ward	\$0.00	
ICU	\$0.00	
Prostheses	\$0.00	
Pharmacy	\$0.00	
Ancillary cover	\$0.00	
Other	\$0.00	
Item charges	\$0.00	
Total	\$600.00	

Services, Items and Fees are populated automatically by Blue Chip, or the user can create manual Episodes, by "getting" Item information from Blue Chip.

Fund: MSP
Product code: 1234567
Member relationship: Spouse
Admission code: Shared Room
Discharge code: Discharged

Claim information for Fund membership is also created automatically by Blue Chip when creating an Episode.

DAY SURGERY

Management of patient episodes
Statistical reporting to regulatory bodies
Health Fund management

Benefits

Eliminate Duplication

When used with Blue Chip - HCN's Specialist Practice Management software, there is no need to key in the patient demographic details again. Simply press the Day Surgery button and the information is automatically transferred into the database.

Improved Efficiency

Shuffle less paper with Blue Chip Day Surgery. Instead of filling out hundreds of forms, simply key the information into the database and Blue Chip Day Surgery takes care of the statistics.

Timely Information to the Statutory Bodies

Once the coding of an episode has been completed it is automatically transferred to the list for file creation and transmission on to the health department. The information is also used to satisfy the needs of the Private Hospital Database (PHDB), the Australian Bureau of Statistics (ABS) and Health Funds such as HCF.

Up-to-date Databases

With Blue Chip Day Surgery's Support plan you receive timely updates to the software as well as updates to the standard databases such as ICD 10. This means that the information you enter is always accurate with the reference databases on your system.

Common Operating System Platform

Blue Chip Day Surgery runs on the popular Microsoft Windows platform. In a networked environment this allows the data to be accessed by several staff at the same time. By sharing the information across a network it is easy to disseminate information to all areas of the day facility. The network also allows your practice to run other programs for information management side by side with Blue Chip Day Surgery.

Multi-User, Multi-Tasking

Each workstation on the network has access to the Blue Chip Day Surgery system. When information is updated on one workstation it is available to everybody on the network. This saves time and improves workflow efficiencies.

Smart Fields

Most fields within the software are "smart fields". This means that when information is entered it learns what has been keyed in to save you having to re-key the information next time. This saves you time and speeds up coding.

External Cause information in can be entered against patient Episodes.

Diagnosis information can be entered against patient Episodes.

Procedure information can be recorded against patient Episodes.
