

IMAGEMATE

HCN imagemate

Give your practice an effective file management solution

Save space

No more walls of patient files crowding your practice

Save on storage costs

No more running out of filing space. Reduced need for external archiving

Litigation

Complete and accurate files can be stored indefinitely

Scan & Store

Scan and burn onto non-rewritable CDs for security or litigation

Privacy

Secure storage of patient files

Compliance

Assists with compliance of Electronic Transactions Act: 1999 for Electronic and Paper

Search/Find

Easily find all documents for a patient, including scanned images

Easy to Use

Just put documents in the scanner and it's done

IMAGEMATE

HCN imagemate

The perfect solution for your file management needs

- Reduces space taken up by files
- Improves practice efficiency
- Protects your practice from litigation
- Streamlines practice communications
- Provides a safe and secure electronic archive solution
- Integrates with HCN Practice Management Solutions

IMAGEMATE

imagemate

From Health Communication Network's Blue Chip family comes **ImageMate** - the answer to effective practice file management. Gone are the days when surgeries had to devote increasing amounts of space to filing the crowded, paper files of their patients. With ImageMate you can scan all these documents into an electronic patient file which is stored in a database on your server.

Over 80% of practice information is unstructured. HCN ImageMate integrates this unstructured data with HCN Practice Management solutions, to provide a complete patient information system. Safe. Secure.

"Any system that electronically retains and stores Referrals and Requests must not permit any loss, improper disclosure, destruction, addition, or alteration of the electronically scanned image of the Referral or Request, nor any compromise of stored information affecting the verification of any digital signatures."

- Notice of Information Technology (IT) Standards under the Electronic Transactions Act 1999 for Electronic and Paper.

The ImageMate solution

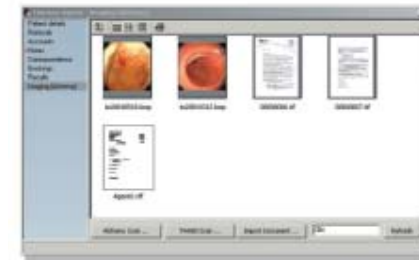

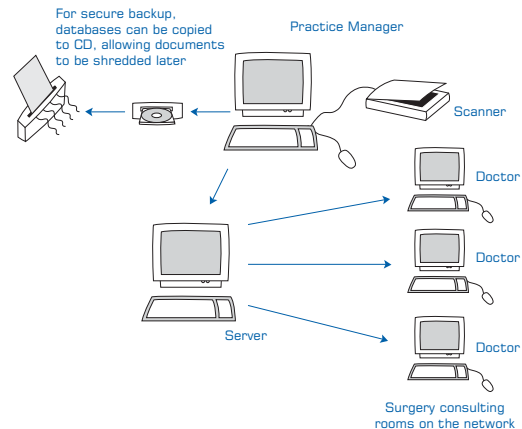

ImageMate is superbly designed software which was developed to index not just your paper based files, but any digitally received clinical information as well. When it is coupled with other HCN software products you have the perfect solution for today and tomorrow with one of the most powerful practice management systems there is. Forget traditional filing systems - for many practices the medical record has now reached unwieldy proportions, but with ImageMate you can scan any document into the database for easy retrieval. Typed records, handwritten notes, faxes, colour photos and even digitally sourced information - it's all indexed and stored against each patient's electronic file.

Using ImageMate is Easy

- Select the patient
- Put the documents in the scanner
- Select "scan"
- Shred the documents

Once the documents are scanned into the database, they are there permanently for easy retrieval from the front desk, as well as all consulting rooms on the network. Doctors need not request a manual patient file anymore, you can simply call up the patient record and view any part of it on screen.

ImageMate is easy to install and use, requiring no special database management skills and no client-server expertise. It is designed to run under Microsoft's Windows operating systems and networks.

- All patient information is at your fingertips. ImageMate can store most unstructured data such as images, scans, documents, sound files and digital camera shots.

• Practice Manager at front desk scanning

• Doctor in consulting room viewing the scans

- Zoom, Print and Launch Application tools are included with ImageMate.

- Computer files already stored can easily be imported into ImageMate. Using "drag and drop" is even easier!

- Use annotations to mark text on images, without disturbing the original image, important for litigation.

The Medical Record Revolution

The Medical Record for many practices has become a receptacle for much more information than was originally intended. As a result, patient files have become bigger than ever before. With ImageMate, you not only have the most comprehensive medical records, but also the security of a complete electronic file that ensures no information can be lost as can happen with paper documents.

In addition, legislation requires that practices retain files for very long periods (7 years or more). This means that filing space is being used up at a much more rapid rate, plus some practices must archive files offsite while still being able to retrieve them quickly. These both contribute to the rising cost of this method of information management.

The Mobile Storage Solution

With ImageMate, you no longer need to worry about storage space. All records are stored in the data base and can be easily retrieved at any time. ImageMate offers a very safe and secure method of archiving by enabling you to electronically store any of your records onto hard disk or CD, which can be stored in safe locations off-site for vital back up. The information can then be restored at a later date if needed.

ImageMate also offers doctors an invaluable mobile storage solution for images, documents and records. Information stored on CDs can be easily searched and therefore used for off-line research as well as permanent storage.
