

AUSTRALIAN INJECTABLE DRUGS HANDBOOK 5TH EDITION

ABOUT AUSTRALIAN INJECTABLE DRUGS HANDBOOK

The Australian **Injectable Drugs** Handbook - 5th Edition is a collaborative venture between pharmacists and nurses throughout Australia. The Handbook offers concise, referenced information commonly sought by nurses and pharmacists at ward level when preparing drugs for administration by injection. It is a comprehensive reference of more than 400 injectable drugs including 55 antineoplastic drugs.

For the 5th edition all existing monographs have been comprehensively updated and monographs have been included for 73 newly marketed drugs. Each referenced monograph includes information on availability, generic and trade names, preparation, administration, stability, compatibility/incompatibility data and special notes. The 5th edition also contains limited information on the administration of more common drugs to infants and children. Considerable effort has gone into the compilation of the monographs to ensure that the information provided is as complete and accurate as possible.

The Handbook is not a compendium of every conceivable pharmacological and pharmaceutical aspect of the drugs listed. There is no attempt to cover information about dosage ranges or adverse effects (other than those which relate to the actual administration of the drug). Unless otherwise stated, the information provided is for the treatment of adult patients.

Edited by Nicolette Burrige and Danielle Deidun for the SHPA Publications, The Society of Hospital Pharmacists of Australia
e-ISBN: 987-0-9871103-1-2
